COOKIE POLICY AND SIMILAR TECHNOLOGIES POLICY

ZETA SIGNALS SERVICE

Effective date: 08.07.2026
Document version: 1.2
Website address: https://www.zetasignals.pl/

§ 1. General provisions

1. This Cookie Policy and Similar Technologies Policy, hereinafter referred to as the **“Cookie Policy”**, sets out the rules for using cookies, LocalStorage, SessionStorage and other similar technologies within the website operating under the name **Zeta Signals**, available at **https://www.zetasignals.pl/**, hereinafter referred to as the **“Service”**.
2. The Service is administered by **Damian Gmur**, a natural person conducting non-registered activity, contact address: **Truskawkowa 13, 05-200 Zagościniec, Poland**, contact e-mail address: **kontakt@zetasignals.pl**, hereinafter referred to as the **“Administrator”**.
3. This Cookie Policy supplements the Terms of Service of Zeta Signals and the Privacy Policy of Zeta Signals.
4. The Service is based on Next.js technology and uses technical solutions provided by third parties, in particular Supabase and, depending on the active configuration, Cloudflare infrastructure and security features.
5. As of the effective date of this Cookie Policy, the Service does not use an active payment operator integration. Technologies related to checkout, payments or access renewals will be implemented only after an appropriate operator has been selected and activated, and this document will then be updated accordingly.
6. The purpose of this Cookie Policy is to provide the User with clear information on what technologies are used in the Service, for what purposes, by whom, for how long and how the User may manage them.
7. This Cookie Policy covers both cookies stored in the browser and similar technologies, in particular LocalStorage, SessionStorage, session identifiers, authentication tokens and other mechanisms for storing information in the User’s terminal device.
8. This document shall be interpreted together with the Privacy Policy, because some information stored or accessed through cookies or similar technologies may constitute personal data or be linked to personal data.

§ 2. What cookies, LocalStorage and similar technologies are

1. **Cookies** are small text files stored on the User’s terminal device, such as a computer, phone, tablet or another device enabling Internet access.
2. Cookies may contain technical information enabling browser recognition, session maintenance, remembering User preferences, ensuring security, login support or proper operation of selected Service functions. After sales are launched, they may also be used to support paid access, checkout or payments where necessary.
3. **LocalStorage** is a browser storage mechanism that allows data to be stored locally on the User’s device. Data stored in LocalStorage may remain stored after the browser is closed until it is deleted by the User, the Service or the browser mechanism.
4. **SessionStorage** is a browser storage mechanism similar to LocalStorage, but the data stored in SessionStorage is generally maintained only for the duration of a given browser session.

5. **Similar technologies** mean other technical solutions enabling information to be stored in the User's terminal device or access to information already stored in that device, regardless of the name or technical implementation.
6. In this Cookie Policy, the term **"cookies"** may also include LocalStorage, SessionStorage and other similar technologies if the context indicates that it concerns storing information or accessing information in the User's terminal device.
7. Deleting data stored in LocalStorage or SessionStorage may result in the User being logged out, losing saved preferences, having to accept the cookie banner again or the malfunction of selected Service functions.

§ 3. Legal grounds for using cookies and similar technologies

1. The use of cookies and similar technologies is carried out in accordance with applicable law, in particular European Union rules on privacy in electronic communications, Polish electronic communications law and the GDPR, where personal data is processed through such technologies.
2. Storing information or accessing information stored in the User's terminal device is permitted in particular where:
    1. the User has been informed in advance about the purpose of such action,
    2. the User has given consent, where consent is required,
    3. storage or access is necessary to provide a service requested by the User,
    4. storage or access is necessary to transmit a communication over a telecommunications network.
3. Cookies and technologies necessary for the operation of the Service may be used without separate User consent if they are necessary to provide a service explicitly requested by the User, ensure communication transmission, login, session maintenance, security, remember the User's privacy choices or - after sales are launched - correctly process an order and payment.
4. Optional cookies and technologies, in particular analytical, advertising, marketing, remarketing, personalization or profiling technologies, may be used only after obtaining the User's appropriate consent, where such consent is required by law.
5. Optional cookies are not activated before the User gives consent where consent is required by law. Lack of consent to optional cookies does not block access to the basic functions of the Service if the technology is not necessary to provide the service requested by the User.
6. Where personal data is processed through cookies or similar technologies, the legal basis for processing may include in particular:
    1. Article 6(1)(b) GDPR - performance of a contract or taking steps prior to entering into a contract,
    2. Article 6(1)(f) GDPR - the Administrator's legitimate interest in ensuring security, stability, protection against abuse and defense against claims and, after sales are launched, also in correctly supporting payments,
    3. Article 6(1)(a) GDPR - the User's consent, where a given category of cookies or similar technologies requires consent.
7. The Administrator's legitimate interest does not replace the requirement to obtain consent to cookies or similar technologies where such consent is required under the rules concerning storing information or accessing information in the User's terminal device.

§ 4. Categories of cookies and technologies used in the Service

1. The Service may use the following categories of cookies and similar technologies:

1) Necessary cookies and technologies

1. These are cookies, LocalStorage, SessionStorage or other technologies necessary for the proper operation of the Service, login, session maintenance, security, Account support or remembering the User’s cookie decisions. After sales are launched, they may also include technologies necessary for the correct operation of paid access, checkout or payments.
2. Without these technologies, the Service may not function properly and use of the Account, user panel or - after sales are launched - paid functions and payments may be impossible.
3. These technologies do not require separate User consent if they are genuinely necessary to provide the service requested by the User.

2) Security cookies and technologies

1. These technologies are used to protect the Service against abuse, attacks, unauthorized access, attempts to bypass security, CSRF attacks and other technical threats. After sales are launched, they may also be used to prevent payment fraud.
2. They may include session identifiers, security tokens, timestamps, login attempt information, technical error data or elements allowing suspicious activity to be detected.
3. The purpose of these technologies is to protect the User, the Administrator, the Account and the integrity of the Service and, after sales are launched, also payment security.

3) Payment cookies and technologies

1. After sales are launched, technologies may be used to process orders, paid access, one-time plans, subscriptions, carts, checkout, link transactions with the User Account and prevent financial fraud.
2. These technologies may be used by the selected external payment operator, checkout provider or Merchant of Record, depending on the final payment model.
3. As of the effective date of this Cookie Policy, the Service does not use an active payment operator, and the technologies described in this category are therefore not active in the production payment process.
4. Before a payment integration is launched, the Administrator will supplement this Cookie Policy with information on the selected provider, the technologies used, their purposes and retention periods.

4) Preference cookies

1. These technologies enable remembering the User’s cookie settings, language version, interface theme or other basic technical preferences.
2. The Service may store information in LocalStorage regarding whether the User has seen the cookie banner, what choices the User made in available settings or whether the banner should be displayed again.

5) Analytical, marketing and advertising cookies

1. As of the effective date of this Cookie Policy, the Service does not use analytical, advertising, marketing, remarketing cookies or tracking pixels without obtaining the User’s separate consent.
2. If the Administrator implements tools such as Google Analytics, Meta Pixel, TikTok Pixel, Hotjar, Microsoft Clarity, affiliate tools or other similar analytical or marketing tools in the future, this Cookie Policy will be updated and the User will be given the option to give or refuse consent before such technologies are activated.

§ 5. Detailed list of cookies and similar technologies

1. The following list describes the main categories of cookies and similar technologies used or potentially used in the Service. Specific technical names may vary depending on the configuration of the Service, Supabase, Cloudflare, browser and software version.

2. The Administrator periodically verifies, where reasonably possible, the actual cookies, LocalStorage keys and third-party technologies used in the Service and updates the list where necessary due to a change in configuration, provider or processing purpose.

1) Supabase Auth - session and login

- **Provider:** Zeta Signals / Supabase.
- **Example technology:** LocalStorage, session token, access_token, refresh_token, Supabase Auth keys, e.g. sb-[project-ref]-auth-token.
- **Purpose:** maintaining the User session, enabling login, preserving access after page refresh, supporting the Account and user panel.
- **Retention period:** for the duration of the session, until logout, token expiry, deletion by the User or according to Supabase configuration.
- **Category:** necessary.
- **Consent:** no, if the technology is necessary for login and Account operation.

2) Authorization and access control

- **Provider:** Supabase / Zeta Signals.
- **Example technology:** Supabase Auth session data, access token, refresh token, session identifier.
- **Purpose:** User authentication, securing access to the panel, verifying login status and - after sales are launched - controlling access to paid functions.
- **Retention period:** according to Supabase session configuration.
- **Category:** necessary.
- **Consent:** no, if necessary to use the Account.

3) Service security

- **Provider:** Zeta Signals / technical providers.
- **Example technology:** CSRF token, session identifier, security data, timestamps.
- **Purpose:** protection against CSRF attacks, unauthorized access, technical abuse and attempts to bypass safeguards.
- **Retention period:** usually for the duration of the session or a shorter technical period.
- **Category:** necessary / security.
- **Consent:** no, if necessary for Service security.

4) Cookie decision

- **Provider:** Zeta Signals.
- **Example technology:** LocalStorage, e.g. cookieConsent, cookiePreferences, zeta_cookie_consent.
- **Purpose:** remembering the User’s decision regarding the cookie banner and privacy preferences so that the banner is not displayed on every visit.
- **Retention period:** until preferences are changed, browser data is deleted or the period configured in the Service expires.
- **Category:** necessary / privacy preferences.
- **Consent:** no, if used only to remember privacy choices.

5) Language and interface preferences

- **Provider:** Zeta Signals.
- **Example technology:** LocalStorage, preference cookie, selected language key.
- **Purpose:** remembering the language version of the Service or basic interface settings.
- **Retention period:** until the preference is changed or the User deletes the data.
- **Category:** preferences / necessary to provide the service according to the User’s choice.

- **Consent:** usually no, if used to implement the User’s choice.

6) Cloudflare - security technologies, if active

- **Provider:** Cloudflare.
- **Example technology:** cookies or browser identifiers required by active traffic protection, browser verification, bot prevention or infrastructure security features.
- **Purpose:** protecting the Service against abuse, automated attacks, unauthorized traffic and other technical threats.
- **Retention period:** according to the active Cloudflare security configuration and for the period necessary to achieve the relevant purpose.
- **Category:** security / necessary where the relevant feature is active and required to protect the Service.
- **Consent:** generally no where the technology is genuinely necessary for security or to provide the service requested by the User; otherwise in accordance with applicable law.

7) Future payment operator - checkout and paid access

- **Provider:** no active provider as of the effective date of this document.
- **Example technology:** checkout cookies, order and transaction identifiers, anti-fraud mechanisms or technologies necessary to process payments.
- **Purpose:** supporting checkout, cart, payments, a one-time plan or subscription, linking the transaction with the Account and preventing fraud, chargebacks and payment abuse.
- **Retention period:** to be specified after the operator is selected, in accordance with its documents and implementation configuration.
- **Category:** payment / security / necessary for payment processing if sales are launched.
- **Consent:** depending on the actual function of the technology and applicable law; technologies necessary for payment may be used without separate consent, while optional technologies require consent where required by law.

8) Analytics and marketing

- **Provider:** no active provider as of the effective date of this document, unless the Service implements such tools later.
- **Example technology:** Google Analytics, Meta Pixel, TikTok Pixel, Hotjar, Microsoft Clarity, affiliate pixels.
- **Purpose:** traffic analysis, statistics, advertising, remarketing, conversion measurement or marketing profiling.
- **Retention period:** depends on the provider.
- **Category:** optional.
- **Consent:** yes, if not necessary for the operation of the Service.

§ 6. Supabase Auth and session storage

1. The Service uses Supabase Auth to handle User registration, login and authorization.
2. Supabase Auth may use LocalStorage, cookies or other browser technical mechanisms to store information about the User session, including access or refresh tokens.
3. Session data is necessary so that the User can:
    1. log in to the Account,
    2. remain logged in after refreshing the page,
    3. use the user panel,
    4. access functions available only to logged-in Users,
    5. after sales are launched, use paid functions once the relevant access has been activated.

4. Blocking LocalStorage, cookies or other browser storage mechanisms may prevent login, session maintenance or proper use of the Zeta Signals panel.
5. Deleting Supabase Auth data stored in the browser may immediately log the User out and require logging in again.
6. The User may end the session by logging out of the Account. The User may also delete locally stored data through browser settings.

§ 7. Future Payment Operator and payment-related technologies

1. As of the effective date of this Cookie Policy, payments in the Service are not actively handled by an external payment operator and the production checkout has not been launched.
2. After a payment operator, checkout provider or Merchant of Record is selected, its own cookies or similar technologies may be used in the purchase process.
3. Payment-related technologies may be used in particular to:
    1. correctly operate checkout,
    2. support the cart or payment form,
    3. identify an order or transaction,
    4. link the payment with the User Account,
    5. support a one-time plan or an automatically renewing subscription if such a model is launched,
    6. detect and prevent financial fraud,
    7. counteract chargebacks and abuse,
    8. ensure payment security,
    9. fulfil the selected provider’s legal obligations.
4. If the User is redirected to an external payment environment or uses embedded checkout, independent cookies and technologies of the selected provider may apply. Their detailed scope, retention period and configuration will result from that provider’s legal documents and the integration settings.
5. The Administrator may not have full control over all cookies and technologies used directly by the operator in its own payment environment.
6. Before payments are launched, the Administrator will update this Cookie Policy, the Privacy Policy and checkout information so that they identify the provider actually selected and describe the actual operation of the integration.

§ 8. Cookie banner and consent management in the Service

1. The Service may display a cookie banner or privacy preferences panel to the User.
2. The cookie banner may be used to:
    1. inform the User about cookies and similar technologies,
    2. enable acceptance of optional cookies, if any are used,
    3. enable refusal of optional cookies,
    4. enable changing preferences,
    5. save the User’s decision so that the message is not displayed on every visit.
3. Cookies and technologies necessary for the operation of the Service may remain active regardless of the User’s decision concerning optional cookies.
4. Optional cookies, in particular analytical, marketing, advertising, remarketing or profiling cookies, are not activated before the User gives consent, where consent is required by law.
5. The User may withdraw consent to optional cookies in a manner not more difficult than giving it, where such a mechanism is required by law.

6. If a cookie preferences panel is available in the Service, the User may change settings from that panel at any time.
7. If a permanent **“Cookie settings”** link is available in the footer of the Service, the User may use it to reopen the preferences panel and change or withdraw consent to optional cookies.
8. If the cookie preferences panel is not available, the User may manage cookies and similar technologies through browser settings.

§ 9. How to check cookies saved by the Service

1. The User may independently check cookies and site data saved by the Service through the browser.
2. Examples of how to check cookies:
    1. Chrome and Edge: click the icon next to the address bar and go to cookie and site data information,
    2. Firefox: click the shield or lock icon next to the address bar and go to cookie and site data information,
    3. Safari: go to privacy settings and the section for managing website data.
3. Technical users may also check LocalStorage and SessionStorage using browser developer tools, usually in the **Application**, **Storage** or similar tab.
4. The actual list of cookies and local data may depend on whether the User is logged in, has - after sales are launched - initiated payment, uses the user panel and has consented to optional cookies.

§ 10. How to manage cookies and LocalStorage in the browser

1. The User may independently manage cookies, LocalStorage, SessionStorage and other site data through the settings of the web browser.
2. The User may in particular:
    1. delete existing cookies and site data,
    2. block cookie storage,
    3. block third-party cookies,
    4. delete LocalStorage and SessionStorage data,
    5. set automatic deletion of data after closing the browser,
    6. use private or incognito mode.
3. Blocking cookies and necessary technologies may result in:
    1. inability to log in to the Account,
    2. the User session not being maintained after refreshing the page,
    3. the Zeta Signals panel not working properly,
    4. after sales are launched, paid access status not being correctly recognized,
    5. after sales are launched, checkout or payment not being processed correctly,
    6. technical errors being displayed by the Service.
4. The following are sample paths for managing cookies in popular browsers. Settings names may differ depending on the browser version, operating system or interface language.

1) Google Chrome

1. Open Chrome.
2. Click the three-dot icon in the upper right corner.
3. Go to **Settings**.
4. Go to **Privacy and security**.

5. Select **Third-party cookies** or **Site settings**.
6. Manage permissions, block cookies or delete site data.
7. To delete data for a specific site, go to site data settings and search for the Service domain.

2) Mozilla Firefox

1. Open Firefox.
2. Click the menu icon in the upper right corner.
3. Go to **Settings**.
4. Go to **Privacy & Security**.
5. In **Cookies and Site Data**, select the relevant settings.
6. You may delete data, manage exceptions or block selected tracking mechanisms.

3) Safari

1. Open Safari.
2. Go to **Settings** or **Preferences**.
3. Go to the **Privacy** tab.
4. Manage cookies, website data and tracking settings.
5. You may delete data for selected websites or block certain mechanisms.

4) Microsoft Edge

1. Open Microsoft Edge.
2. Click the three-dot icon in the upper right corner.
3. Go to **Settings**.
4. Go to **Cookies and site permissions**.
5. Select **Manage and delete cookies and site data**.
6. Delete data, block third-party cookies or set exceptions for selected websites.

§ 11. Session and persistent cookies

1. The Service may use both session cookies and persistent cookies.
2. **Session cookies** are stored for the duration of the browser session and are usually deleted after the browser is closed, unless the browser or service configuration works differently.
3. **Persistent cookies** remain stored on the User’s device for a specified period or until deleted by the User, browser, Service or provider of a given technology.
4. LocalStorage may work similarly to persistent cookies because data stored in it may remain in the browser until deleted.
5. The retention period of individual cookies and local data may depend on the configuration of the Service, Supabase, active Cloudflare features, a future payment operator, the User’s browser settings, manual deletion by the User or technical changes in the Service.

§ 12. First-party and third-party cookies

1. **First-party cookies** are set directly by the Service or within its domain.
2. **Third-party cookies** are set by external service providers whose solutions are used in the Service or - after sales are launched - in the payment process.
3. Cookies or third-party technologies in the Service may come in particular from:
    1. Supabase - for authentication, database and session infrastructure,
    2. Cloudflare - for infrastructure security where the active protection configuration requires browser technologies,

3. a future payment operator - only after checkout or a payment process is implemented.

4. As of the effective date of this document, the Service does not use a production payment operator integration, and technologies of a specific payment provider are therefore not active.
5. The Administrator does not have full control over the lifecycle of all cookies used by third parties in their own environments.
6. When proceeding to an external provider’s website, the User is advised to read that provider’s legal documents.

§ 13. Lack of consent to optional cookies

1. Refusal of consent to optional cookies does not prevent the use of basic Service functions, unless a given function technically requires a specific necessary technology.
2. Refusal of consent to analytical, advertising or marketing cookies must not block access to the Service if those cookies are not necessary to provide the service requested by the User.
3. The Administrator does not use mechanisms forcing consent to optional cookies as a condition of access to the Service if this is not compliant with applicable law.
4. Optional cookies are, to the extent required by law, rejectable in a manner not more difficult than accepting them.

§ 14. Updating the cookie list

1. Technologies used in the Service may change along with the development of the Service, Next.js updates, Supabase configuration, changes to Cloudflare settings, implementation of a payment operator or introduction of new functions.
2. The Administrator periodically verifies, where reasonably possible, the actual list of cookies, LocalStorage keys, SessionStorage data and similar technologies used in the Service.
3. In the event of implementing new categories of cookies, in particular analytical, marketing, advertising or remarketing cookies, the Administrator will:
    1. update this Cookie Policy,
    2. update the cookie banner or preferences panel, where required,
    3. ensure the possibility to give or refuse consent before optional cookies are activated, where consent is required,
    4. supplement the Privacy Policy if personal data is processed for a new purpose.
4. The User may check currently saved cookies and site data through browser settings.

§ 15. Security and technical limitations

1. The Administrator makes reasonable efforts to ensure that cookies and similar technologies used in the Service are limited to the scope necessary to achieve specified purposes.
2. The Administrator applies appropriate technical and organizational measures to protect data processed through cookies and similar technologies.
3. The use of cookies and similar technologies does not knowingly lead to the collection of data excessive in relation to the purposes specified in this Cookie Policy.
4. The User is advised to regularly update the web browser and operating system, as outdated software may increase security risks.
5. The User is advised to use trusted devices and networks, particularly when logging in to the Account and, after sales are launched, when making payments.

§ 16. Changes to the Cookie Policy

1. The Administrator may amend this Cookie Policy in the event of:
    1. changes in law,
    2. changes in technologies used in the Service,
    3. changes in external providers,
    4. implementation of new Service functions,
    5. implementation of new cookies or similar technologies,
    6. changes in payment processing,
    7. the need to clarify information provided to Users.
2. The current version of the Cookie Policy is published in the Service.
3. If the changes are significant for User privacy, the Administrator may inform Users additionally, for example through a message in the Service or by e-mail.

§ 17. Contact

1. In matters relating to this Cookie Policy, the User may contact the Administrator at: **kontakt@zetasignals.pl**.
2. The Privacy Policy of Zeta Signals also applies to matters concerning personal data processing in connection with cookies and similar technologies.

§ 18. Final provisions

1. This Cookie Policy applies from **08.07.2026**.
2. The Cookie Policy is available free of charge in the Service in a manner enabling its acquisition, reproduction and recording.
3. In matters not regulated by this Cookie Policy, applicable Polish and European Union law shall apply.
4. This Cookie Policy shall be interpreted together with the Terms of Service and the Privacy Policy of Zeta Signals.
